**A NOTE ON *Pseudoxyops perpulchra* (Westwood, 1889), NEW  
RECORD FOR THE COLOMBIAN MANTODEA AND A  
CHECKLIST OF SPECIES DEPOSITED IN OTHER MUSEUMS  
OF THE WORLD**

Julián A. Salazar E.

Centro de Museos, A.A.275 Manizales

The following material of colombian mantids are deposited in the Staatliches Museum für Naturkunde, Karlsruhe (SMNK) and the Zoologische Staatssammlung München in Germany under the care of Dr. Reinhard Ehrmann and Mr. Tanja Kothe respectively. The collection's were kindly supplied me by them and is to genera and species with respective data and includes new records (indicated by "N") related to our recent Checklist of SALAZAR (2002). A short note and illustration about the presence of the mantid *Pseudoxyops perpulchra* (Ww.) in Colombia is given. Remarks that some species from the München Museum were identified by R. Ehrmann and the late Max Beier. I am indebted to Dr. Ehrmann and T. Kothe for Mantid's information and new support to our colombian studies about this insects (through Dr. R. Roy, MNHN). A Preliminar report were published in SALAZAR (2001 b).

**a. Material from Staatliches Museum für Naturkunde (SMNK)**

**ACANTHOPIDAE**

Acontistinae

*Acontista concinna* (Perty, 1832): Female, Valle, Cali (3.37N-76.31W), 1000 m., 28. VII. 1974. Leg. M. Becker.

*Acontista multicolor* (Saussure, 1870): Female, Sucre, San Onofre (9.44N-75.32W), VII.1977. Leg. M. Sauer.

*Raptrix perspicua* (Fabricius, 1787): Female, Sucre, San Onofre (9.44N-75.32W), VII. 1977. Leg. M. Sauer.

**THESPIDAE**

Thespininae

*Thespis major* (Giglio-Tos, 1916): Male, Cundinamarca, near Bogota (4.34N-74.00W), VII.1981. Leg. H. Lehmann.

## LITURGUSIDAE

### Liturgusinae

*Liturgusa mesopoda* (Westwood, 1889): Female, Sucre, San Onofre (9.44N-75.32W), VII. 1977. Leg. M. Sauer.

## MANTIDAE

### Angelinae

*Angela guianensis* Rehn, 1906: Female, Mitú, Vaupes Schutz- Gebiet (1.16N-70.12W) 600 km SE Bogota. VIII. 1979. Leg. R. Wanninger.

*Angela trifasciata* Stal, 1877: Female, Santander, Barbosa (5.57N-73.42W), 160 km N Bogota. IX. 1965. Leg. M. Ströhle.

### Choeradodinae

*Choeradodis rhombicollis* (Latreille, 1833): Male, Vichada, Sabana-El Unuma (3.50N-70.56W), 350 km E Bogota, VII. 1977. Leg. M. Sauer. Male, Mitú, Vaupes Schutz- Gebiet (1.16N-70.12W), 600 km SE Bogota, VIII-1979. Leg. R. Wanninger. Male, Valle, Cali (3.37N-76.31W), 1000 m., 28-VII. 1974. Leg. M. Becker.

### Photininae

*Paraphotina reticulata* (Saussure, 1871): Male, Meta, Villavicencio, ex coll. Löbbbecke Museum + Aquazoo, ded. S. Löser, 1989.

### Vatinae

*Phyllovates brevicornis* (Stal, 1877): Male, Santander, Barbosa (5.57N-73.42W), 160 km N Bogota, IX. 1965. Leg. M. Ströhle.

*Phyllovates chlorophaea* (Blanchard, 1836): Male, Cundinamarca, near Bogota (4.34N-74.00W), X.1992. Leg. H. Haker. Male, Mitú, Vaupes Schutz- Gebiet (1.16N-70.12W), 600 km SE Bogota, VIII-1979. Leg. R. Wanninger.

"N"- *Vates pectinicornis* (Stal, 1877): Male, Mitú, Vaupes Schutz-Gebiet (1.16N-70.12W), 600 km SE Bogota, VIII-1979. Leg. R. Wanninger.

### Stagmatopterinae

"N"- *Stagmatoptera supplicaria* (Stoll, 1813): Two males and one female, Mitú, Vaupes Schutz-Gebiet (1.16N-70.12W), 600 km SE Bogota. VIII. 1979. Leg. R. Wanninger.

*Stagmatoptera septentrionalis* (Saussure & Zehntner, 1894): One male and one female, Cundinamarca, near Bogota (4.34N-74.00W). X. 1992. Leg. H. Haker.

*Pseudoxyops perpulchra* (Westwood, 1889) (Fig.1)

The genus *Pseudoxyops* was erected by Saussure & Zehntner in 1894 on the basis of certain characters present in a female specimen described by WESTWOOD (1889) as

belong to *Stagmatoptera* Burmeister with type species *St. perpulchra* from Brazil (KIRBY, 1904). REHN (1911) summarized the diagnosis of *Pseudoxyops* allied to *Oxyopsis* Caudell (except in the sharp-pointed eyes present in *Oxyopsis*) as following notes: Eyes almost subacuminate, conical. Pronotum elongate, slender, the margins hardly serrate. Tegmina oval, obtuse, ampliate for two thirds the distance from the base, opaque. Costal veins very distinct and disposed more transverse than longitudinal, stigma linear. Wings pellucid, with yellow maculae. Apex subangulate. Anterior femora with four external spines. Five neotropical species are known in the genus inhabiting Bolivia, Brazil, Paraguay or Argentina, with a first record of *Pseudoxyops perpulchra* (Ww.) for Colombia with the following specimen and locations:

“N”- Female, Putumayo, Mocoa (1.08N-76.37W), am Rio Caquetá, 130 km SW Florencia, VII. 1977. Leg. M. Sauer.

#### **b. Material from the Zoologische Staatssammlung München**

#### **ACANTHOPIDAE**

##### Acontistinae

*Acontista* spec. (larvae): Antioquia, Medellin, La Estrella, 1700 m., 24. II- 2.III. 1962. Leg. P.B. Schneble.

#### **THESPIDAE**

##### Pseudomiopteryginae

*Pseudomiopteryx decipiens* Giglio-Tos, 1915: Male, Antioquia, Medellin, La Estrella, 1700 m. Leg. P.B. Schneble.

##### Thespininae

*Thespis metae* Hebard, 1922: Male, Cundinamarca, Monterredondo, 1420 m., 7.VII. 1961. Leg. P.B. Schneble.

##### Oligonicinae

Genus *Thesprotia* Stal, 1877

For Colombia this genus was inadvertently omitted by myself in recent checklist's published in several papers (SALAZAR, 1999, 2001 a, 2002). A detail study is considered in this issue by A. Agudelo and L. Chica.

“N”- *Thesprotia macilenta* Saussure & Zehntner, 1894 (= *T. alvarengai* Sss.& Zhnt.?): Four males, Cundinamarca, Monterredondo, 1420 m., 3.VI. 1961, 15.VII. 1961, 10, 25. VIII.1961. det. M. Beier. Leg. P.B. Schneble.

## MANTIDAE

### Stagmomantinae

*Stauromantis theophila* Rehn, 1904 (= *Stauromantis pagana* Sss.): Male, Antioquia, Mutata, 12. 1964. det. M. Beier. Leg. B. Schneble.

### Choeradodinae

*Choeradodis rhombicollis* (Latreille, 1833) (= *Choeradodis servillei* W-M.): Male, Valle, Anchicayá, 25.X. 1994. Rautenstrauch, Augsburg.

### Stagmatopterinae

"N"- *Stagmatoptera supplicaria* (Stoll, 1813): Male, Boyacá, Muzo. det. M. Beier.
